

LeadFinder

Lead intelligence & decision-maker discovery

CLIENT HANDOFF

Application	https://intelligent-lead-finder.vercel.app
Hosting	Vercel (web) · Supabase (database & auth) · serverless background worker
Data sources	Google Maps (Apify or Outscraper) · Yelp (Apify) · Prospeo contact enrichment
Scope	Search → Enrich → Review → Export / Google Sheets sync
Updated	19 Jul 2026

How to think about LeadFinder. This platform is for research, organization, review, and export of business data. It does **not** send cold email, SMS, or any automated outreach.

1 · What LeadFinder does

LeadFinder turns a simple search — an industry and a location — into a clean, deduplicated database of businesses and their decision-makers, ready to export or push straight into your own Google Sheet. You choose the data source per search, approve the cost up front, and the platform runs the whole pipeline: collect, normalize, de-duplicate, optionally enrich, then review and deliver.

- **Search** — enter an industry/term, country, city, and result count.
- **Estimate & confirm** — see the low/expected/high cost before anything runs, and approve a hard spending cap.
- **Collect & dedupe** — companies are normalized and de-duplicated automatically (never the same business twice).
- **Enrich (optional)** — add decision-maker names, titles, verified work emails, and phones via Prospeo.
- **Deliver** — export CSV/XLSX or auto-sync every new lead into a Google Sheet.

2 · Your data sources

Each source is connected once under **Settings** → **Integrations** with your own API key, stored encrypted. You pick the source per search; they never share credentials.

Source	What it collects	When to use it
Google Maps · Apify	Rich business profiles + optional decision-maker leads	Deepest data, built-in enrichment
Google Maps · Outscraper	Core business data at a low flat rate (\$3/1k)	High-volume, budget-first runs
Yelp · Apify	Yelp business profiles, ratings, categories, contact info	Local/service niches strong on Yelp
Prospeo	Work-email finder & verifier for contacts	Add verified emails to any company

New in this release: Outscraper and Prospeo are live, and a dedicated **Yelp Leads Scraper** tab has been added. Yelp is switched on per workspace after a short terms review — ask us to enable it.

3 · Your access

Sign in	Email & password. Creating an account signs you straight in — no verification email to wait for.
Workspace	Your team's private space. All data is isolated per workspace.
Roles	Owner, Admin, Researcher, Operations, Viewer — each with the right permissions.
Install as app	Use the Install app button in the sidebar (Chrome/Edge) for a desktop/phone icon.

4 · Cost controls — you are always in charge

- Every paid search shows a **low / expected / high** estimate before it runs.
- You approve a **hard maximum cost**; the provider is told to stop at that ceiling.
- Bring your own provider keys — you pay providers directly at their rates, no markup.
- Workspace budget caps and per-run limits prevent surprise spend; usage is tracked per run, source, and feature.
- De-duplication means you never pay to store the same business twice.

5 · Deliver to your Google Sheet

Under **Settings** → **Integrations** → **Destinations**, connect a Google Sheet (or webhook / n8n / Make / Zapier). Turn on auto-sync and every new lead from future runs is appended to your sheet automatically — idempotent, so rows are never duplicated.

Questions or want Yelp enabled for your workspace? Reach out and we'll walk you through it.
