

LeadFinder

How a search becomes deliverable leads

PROCESS FLOW

Every search follows the same pipeline no matter which source you pick. Paid steps (in blue) are always estimated and confirmed first; optional steps (in teal) only run when you ask for them.

1

Search

Enter industry/term, country, city, result count — on Lead Finder or the Yelp tab.

2

Estimate & confirm

See low / expected / high cost, then approve a hard maximum spending cap.

3

Collect

A durable background job runs your chosen source (Google Maps or Yelp) with the cap attached.

4

Normalize

Raw provider records are mapped into one clean company model — fields, phones, addresses.

5

De-duplicate

Matched on source ID, domain, phone, and name+address — the same business is never stored twice.

6

Enrich (optional)

Send companies through Prospeo for verified work emails and phones — its own estimate & confirm.

7

Review

Inspect companies and contacts, quality flags, sources, and provenance in the dashboard.

8

Deliver

Export CSV/XLSX, add to lists, or auto-sync new leads into your Google Sheet / webhook.

Where the data comes from

Lead source	Powered by	Notes
Google Maps	Apify (rich) or Outscraper (low-cost)	Pick per search by depth vs. budget
Yelp	Apify — approved Actor memo23/yelp-scraper	Separate connection; enabled per workspace after terms review

Lead source	Powered by	Notes
Contact enrichment	Prospero	Verified work emails & phones; repeat lookups free for 90 days

What stays true at every step

- **No surprise spend** — nothing paid runs without your confirmed hard cost cap.
- **Honest data** — a company email is never labeled a decision-maker email; nothing is invented or falsely marked “verified.”
- **Your keys, your data** — provider credentials are encrypted and workspace-isolated; you pay providers directly.
- **Resumable & safe** — jobs recover after interruptions and never double-charge or double-store.
- **Research only** — the platform organizes and exports data; it never sends outreach on your behalf.
